DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 2, 2008 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 – 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Noda et al. (US 2001/0044611).

With reference to claims 1 – 3 and 7 – 12, Noda et al. (hereinafter “Noda”) discloses an absorbent article comprising a topsheet (2), a backsheet (3) and an absorbent body (4) interposed therebetween [0015] wherein the backsheet includes a colored area with a light transmittance and/or a non-colored area or a colored area (including white as a color) with an inspection portion as set forth on page 12, [0026 –

0026] and figure 1. Noda discloses an article having a light transmittance of 45% as set forth in [0031].

With respect to claims 4 – 6, Noda provides graphics (i.e., colored area) that are printed on the backsheet [0025] and therefore provide an identification to identify a front-rear orientation.

Response to Arguments

Applicant's arguments filed October 2, 2008 have been fully considered but they are not persuasive.

In response to the applicant's arguments that Noda does not disclose anything about the absorbent article itself having a light transmittance, the examiner contends that the applicant's arguments are not commensurate with the scope of the claims. The claim requires the absorbent article itself to have a specific light transmittance, however, the backsheet as disclosed by Noda and having the claimed light transmittance is a part of the article itself. The applicant appears to argue that the entire article has a specific light transmittance, but this is neither recited in the pending claims nor supported by the originally filed specification. See, for example, page 14, lines 4 – 7 and page 21, lines 18 – 21 which support , in addition to the remaining parts of the specification, the backsheet only having a pigmented layer from which the light transmittance is determined.
